

DEVYANSHU AGRAWAL

i.devyanshv@gmail.com

Lucknow, India | devyflow.in | github.com/devyl-byte | [LinkedIn](#)

Available for full-time or part-time internships; remote or onsite, subject to location.

PROFILE

Computer Science undergraduate and Software Engineer Trainee building backend APIs with Java, Python and SQL. Experience with factory energy analysis, Spring Boot, FastAPI and real-time applications.

EDUCATION

University of Lucknow | B.Tech in Computer Science

Expected June 2027

CGPA: 8.8/10

EXPERIENCE

Ittransition Group | Software Engineer Trainee

Aug 2026 - Present

- Develop Java and Python API endpoints with SQL for a factory energy-analysis platform.
- Build frontend-facing APIs that retrieve data for machines that overheated within a specified time window.
- Contribute backend functionality for consumption analysis, waste identification, energy-cost calculations and efficiency recommendations.

TECHNICAL SKILLS

Languages: Java 21, Python, SQL

Backend: Spring Boot, Spring Data JPA, FastAPI, REST APIs, WebSocket/STOMP, Pydantic

Databases: PostgreSQL, SQLite, relational schema design, parameterized SQL

Tools: Git, GitHub, Maven, Docker

Foundations: Object-oriented programming (OOP), database fundamentals (DBMS)

DSA practice (Java): Arrays and strings, hashing, stacks and queues, binary search, recursion, trees, graphs, dynamic programming, time and space complexity

Web: React, JavaScript, TypeScript, HTML/CSS, API integration

PROJECTS

Store Intelligence | Backend APIs

Retail analytics prototype | [GitHub repository](#)

Python, FastAPI, Pydantic, SQLite, Docker

- Implemented 5 business API endpoints covering event ingestion, visitor metrics, conversion funnels, heatmaps and rule-based alerts.
- Built Pydantic validation and SQLite persistence with event-ID deduplication, parameterized SQL and rejected-record logging.
- Selected FastAPI and SQLite for the prototype and organized backend development into ingestion, storage and analytics modules.

CraveNChat | Backend Developer

Dec 2025 - Apr 2026

Java 21, Spring Boot, Spring Data JPA, PostgreSQL, WebSocket/STOMP

Team of 2 | [GitHub repository](#)

- Defined the product concept and selected Spring Boot for a two-person canteen ordering and campus chat application.
- Implemented an order-placement API that saves orders through Spring Data JPA and broadcasts new orders to the dashboard over WebSocket/STOMP.
- Developed the backend for real-time chat using Spring messaging and WebSocket/STOMP.

ACHIEVEMENTS

- Placed among the top 15,000 in Google Big Code Challenge 2026.
- Selected as a finalist in the Scaler x Meta x Hugging Face Hackathon 2026.
